

High Performance

High Performance Brake Pads for Medium-Duty Applications

Today, many medium-duty truck fleets are exploring new ways to better manage margins and overall cost without sacrificing performance and quality. Formula Blue disc pads from Bendix Spicer Foundation Brake were developed to address this need.

Formula Blue medium-duty pads use only proven friction material that raise the bar on value and performance. Formula Blue pads easily meet the needs of the vast majority of medium-duty vehicles on the road today.

Durability

Long-Wearing, Quiet-Running Durability

Advanced engineering allows Formula Blue medium-duty disc pads to provide you higher levels of performance and cost-effectiveness. Two formulations of friction materials - the 109 and 111 series products - cater to a wide range of Class 6 and 7 vehicle applications.

The 109 Series (Premium) friction material is recommended for commercial vehicles where quiet operation is a key requirement. Our Formula Blue 111 series (Heavy Duty) friction material is suggested for vocations where vehicles make repeated or significant sustained breaking applications. Both are proven to perform equal to or better than competitive-brand Premium and Heavy Duty pads.

We have what you need for these applications and more!
