Work trucks have to handle some of the most dirtiest and rugged terrains and environments out there.

Tidewater Fleet Supply can keep you and your customers trucks running great and with less down time with more great parts and products below.

This summer “keep your cool” through our AirSource and Truck Air Parts product groups, MEI offers the industry’s only “True All Makes” air conditioning and heating parts

The cost of a new set of shocks is roughly the same as the cost of just one steer tire, damaged as a result of degraded shocks. Worn shock absorbers are not only uncomfortable, they can also impact safety, lead to truck downtime and increase operational expense. Choose Monroe for your lift axle and all your shock needs.

We have many brands in stock with parts for your work truck. When you need to go to work, on your work truck, you need to go to Tidewater Fleet Supply. Where our people answer the phone, not an answering machine

Tailgate Latch Assembly	Dump Body Vibrators	Inspection Door	4-Way, 2-Position Solenoid Air Valve	Tie Rod Style Cylinders
				
Provides a seal for dump body and trailer tailgates and is available in steel, stainless steel, or aluminum.	Use thousands of pounds of force to loosen excess materials in the truck body.	Provides a small access opening in the tailgate for any task that does not require the entire tailgate to be lowered.	Controls the air flow required for precise operation in many air cylinder applications.	Are ideal for dump truck operators to engage and disengage tailgate latches from inside their vehicle.
4-Way, 3-Position Air Valve	Shovel Holder for Trucks	Dump Lower Hinge Assembly	Dump Body-Up Indicator Kit	4-Way, 2-Position Air Valve
				
Controls the air flow required for precise operation in many air cylinder applications.	Mounts to the side of your vehicle to store a shovel or other round handled tool during travel.	Welds to your truck to secure the lower part of the tailgate when in the closed position.	Mounts to the frame of your vehicle to notify you when dump body is raised.	Controls the air flow required for precise operation in many air cylinder applications.
